

New Air Assist Spray Guns Keep Cabinet Maker on Cutting Edge

CUSTOMER

Cabinet Manufacturer

GRACO EQUIPMENT

PerformAA 1500 Manual Air Assist Spray Gun

CHALLENGE

Many manufacturers make it a point to be on the cutting edge of new technology. Whether it's increasing production, reducing costs, or better finish quality, continuous improvement is always a main priority.

A large cabinet manufacturer was no different. In the last five years, they already upgraded proportioning equipment and paint kitchen pumps to the latest Graco models.

Spray gun performance was next. Transfer efficiency, finish quality, cost savings and ergonomics were top of mind.

SOLUTION

When looking for options, Graco was the clear front-runner. Their current Graco equipment was performing great, and they liked A+ customer service reassurance.

The finishing engineer was excited to learn about and sign up for a field trial of Graco's new PerformAA air assist (AA) spray gun line. He said, "It's a great way to stay on the leading edge of technology available."

RESULTS

Two PerformAA 1500 manual air assist spray guns were put on the finishing line for several months. They improved performance in these areas:

- **Comfort:** The PerformAA allowed operators' hands to stay in a more neutral position while spraying.
- **Less air:** Technicians were able to lower the atomization air pressure 5 psi when using correct air caps for each material.
- **Cleanliness:** The air cap stayed cleaner, and required less maintenance throughout the day.
- **Better finish:** Finish quality met or exceeded requirements, lowering the number of recalled parts.

Continued technology improvements prove to be the right moves for this cabinet manufacturer. With the addition of PerformAA manual air assist spray guns to their finishing line, their edge just got a little sharper.
